

## Claims

1. An improvement in or relating to spectacles comprising a frame (2) of a formable material, which is adaptable to a form desired and to glasses (4), which are to be fixed to said frame (2), **characterized in** that the frame (2) is made of a material, which in an unformed, original state is fixed to its form but soft and bendable, which after a change of temperature allows a fitting of the frame to an user's shape of the face and which after returning to a normal temperature level has fixed the frame (2) in position after the actual shape of the face at the same time as the frame (2) is somewhat bendable without losing its unique form, said frame (2) comprises attachments (3) for arched glasses (4) adjusted to the shape of an eye, said glasses are used for covering a major part of the user's visual field and are fixable into position by means of said attachments (3) on a predetermined distance from the frame (2) in obtaining a correct distance relative the eyes and eye lashes of an user.
2. An improvement according to claim 1, **characterized in** that the attachments (3) for the glasses (4) allow an adjusting of the glasses (4) in depth/laterally to adjust the distance of the glasses (4) in relation to the frame (2), said attachments (3) consist of screws, magnets or rubber strips.
3. An improvement according to claim 1 or 2, **characterized in** that the sides and/or front of said spectacles (1) are covered with side shields (8) respectively a film preferably of plastic (5), which extends over the glasses (4) and the frame (2) to cover edges and to serve as protection for the spectacles (1) at the same time as a stability is given to the glasses (4) against the frame (2).
4. An improvements according to any of the preceding claims, **characterized in** that the frame (2) includes fixing means of elastic strings (6), sidepieces (7) or a

fastening device, which closes around the ear or stretches up towards the forehead over the head on an user to end back in the neck.

5. An improvement according to claim 1, **characterized in** that the frame (2) is formed by a harder material in order to give reinforcements in selected locations alternatively that the harder material is fastened on the frame (2) after forming against the face of the user.
6. An improvements according to claim 1, **characterized in** that only a part of the frame (2) allows adaptation to the frame after change of the temperature.
